

ALUMINUM GROUP OUTSERT[®] SIGNAGE

PAGE INSERT SIGN - INSTALLATION INSTRUCTION

SCREW MOUNT: Screw holes have been drilled in the backer assembly of the sign. The message tiles must be removed to expose the mounting screw holes. Use these holes as a template to mark the surface for drilling. #6 x 1" phillips pan hd screws (provided) are used to secure the sign (NOTE: DO NOT OVER TIGHTEN SCREWS). Smaller signs may only require (2) screws. For drywall or brick, anchors (provided) must be used. A 3/16" hole is recommended for the anchors.

TAPE MOUNT OPTION: The door or smooth wall surface in the area the tape pads contact the wall should be clean. Lightly mark the spot for the sign by using the outside of the sign as a template. Remove the protective cover of the tape pads on the back of the sign. The message tiles should be removed to apply pressure on the tape pad areas. Position and press firmly especially in the tape pad areas.

The **SLIDING LENS END CAP** can be installed on either side of the backer assembly to allow the lens to slide left or right, depending on which side of the door the sign is installed.
